

HANDCRAFTED ELECTRONICS

BINARY CLOCK-BAROMETER

Time and indoor climate, encoded in light

More than a clock: a compact home information station in a handcrafted wooden enclosure.

FIVE EVERYDAY FUNCTIONS

1

PRECISE TIME & DATE

The DS3231 RTC keeps time independently from the main power supply.

2

TEMPERATURE & HUMIDITY

The BME280 monitors the essential indoor climate parameters.

3

PRESSURE-BASED WEATHER

Five dedicated LEDs indicate storm, rain, cloudy, clear or dry conditions.

4

ALARM

A dedicated setup mode with a blue enabled indicator.

5

ADAPTIVE BRIGHTNESS

The BH1750 automatically adjusts the LEDs to ambient room light.

WHAT MAKES IT DISTINCTIVE

Four decimal digits are expressed in genuine binary code.

Every wooden enclosure is built and finished by hand.

A 2000 mAh Li-Po enables portable use; micro-USB powers and charges the device.

Color-coded LED groups separate data, modes and weather without a screen.

TECHNOLOGY INSIDE
